Custom Carrefour CRM for car rental management.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

- **Maintenance and Optimization of the Legacy Codebase.** Conducted a thorough audit of the existing code to identify and address potential issues and vulnerabilities.
 - Improved system performance by reducing page load times and enhancing data processing speeds.
 - Rapid Bug Fixing. Ensured swift identification and resolution of bugs, minimizing system downtime and improving the user experience.
 - Improving Code Quality. Implemented best practices and design patterns to ensure the codebase is robust and scalable.
- **Implementation of New Features.** Added new functionalities tailored to the client's specific needs, such as advanced booking management, customer feedback integration, and automated reporting tools.
 - User Interface Enhancements. Improved the user interface to provide a more intuitive and user-friendly experience for both the client's staff and end-users.
- **Ongoing Support and Collaboration.** Maintained regular communication with the client to understand their evolving needs and priorities, ensuring that our solutions align with their business goals.
 - Documentation. Created comprehensive documentation to support the client's ongoing use and future development of the system.

BUSINESS DESCRIPTION

QuicklisterPro is a real estate platform that allows users to list their properties on the 3rd party services: Rightmove and Zoopla, which allow users to easily sale or let their properties.

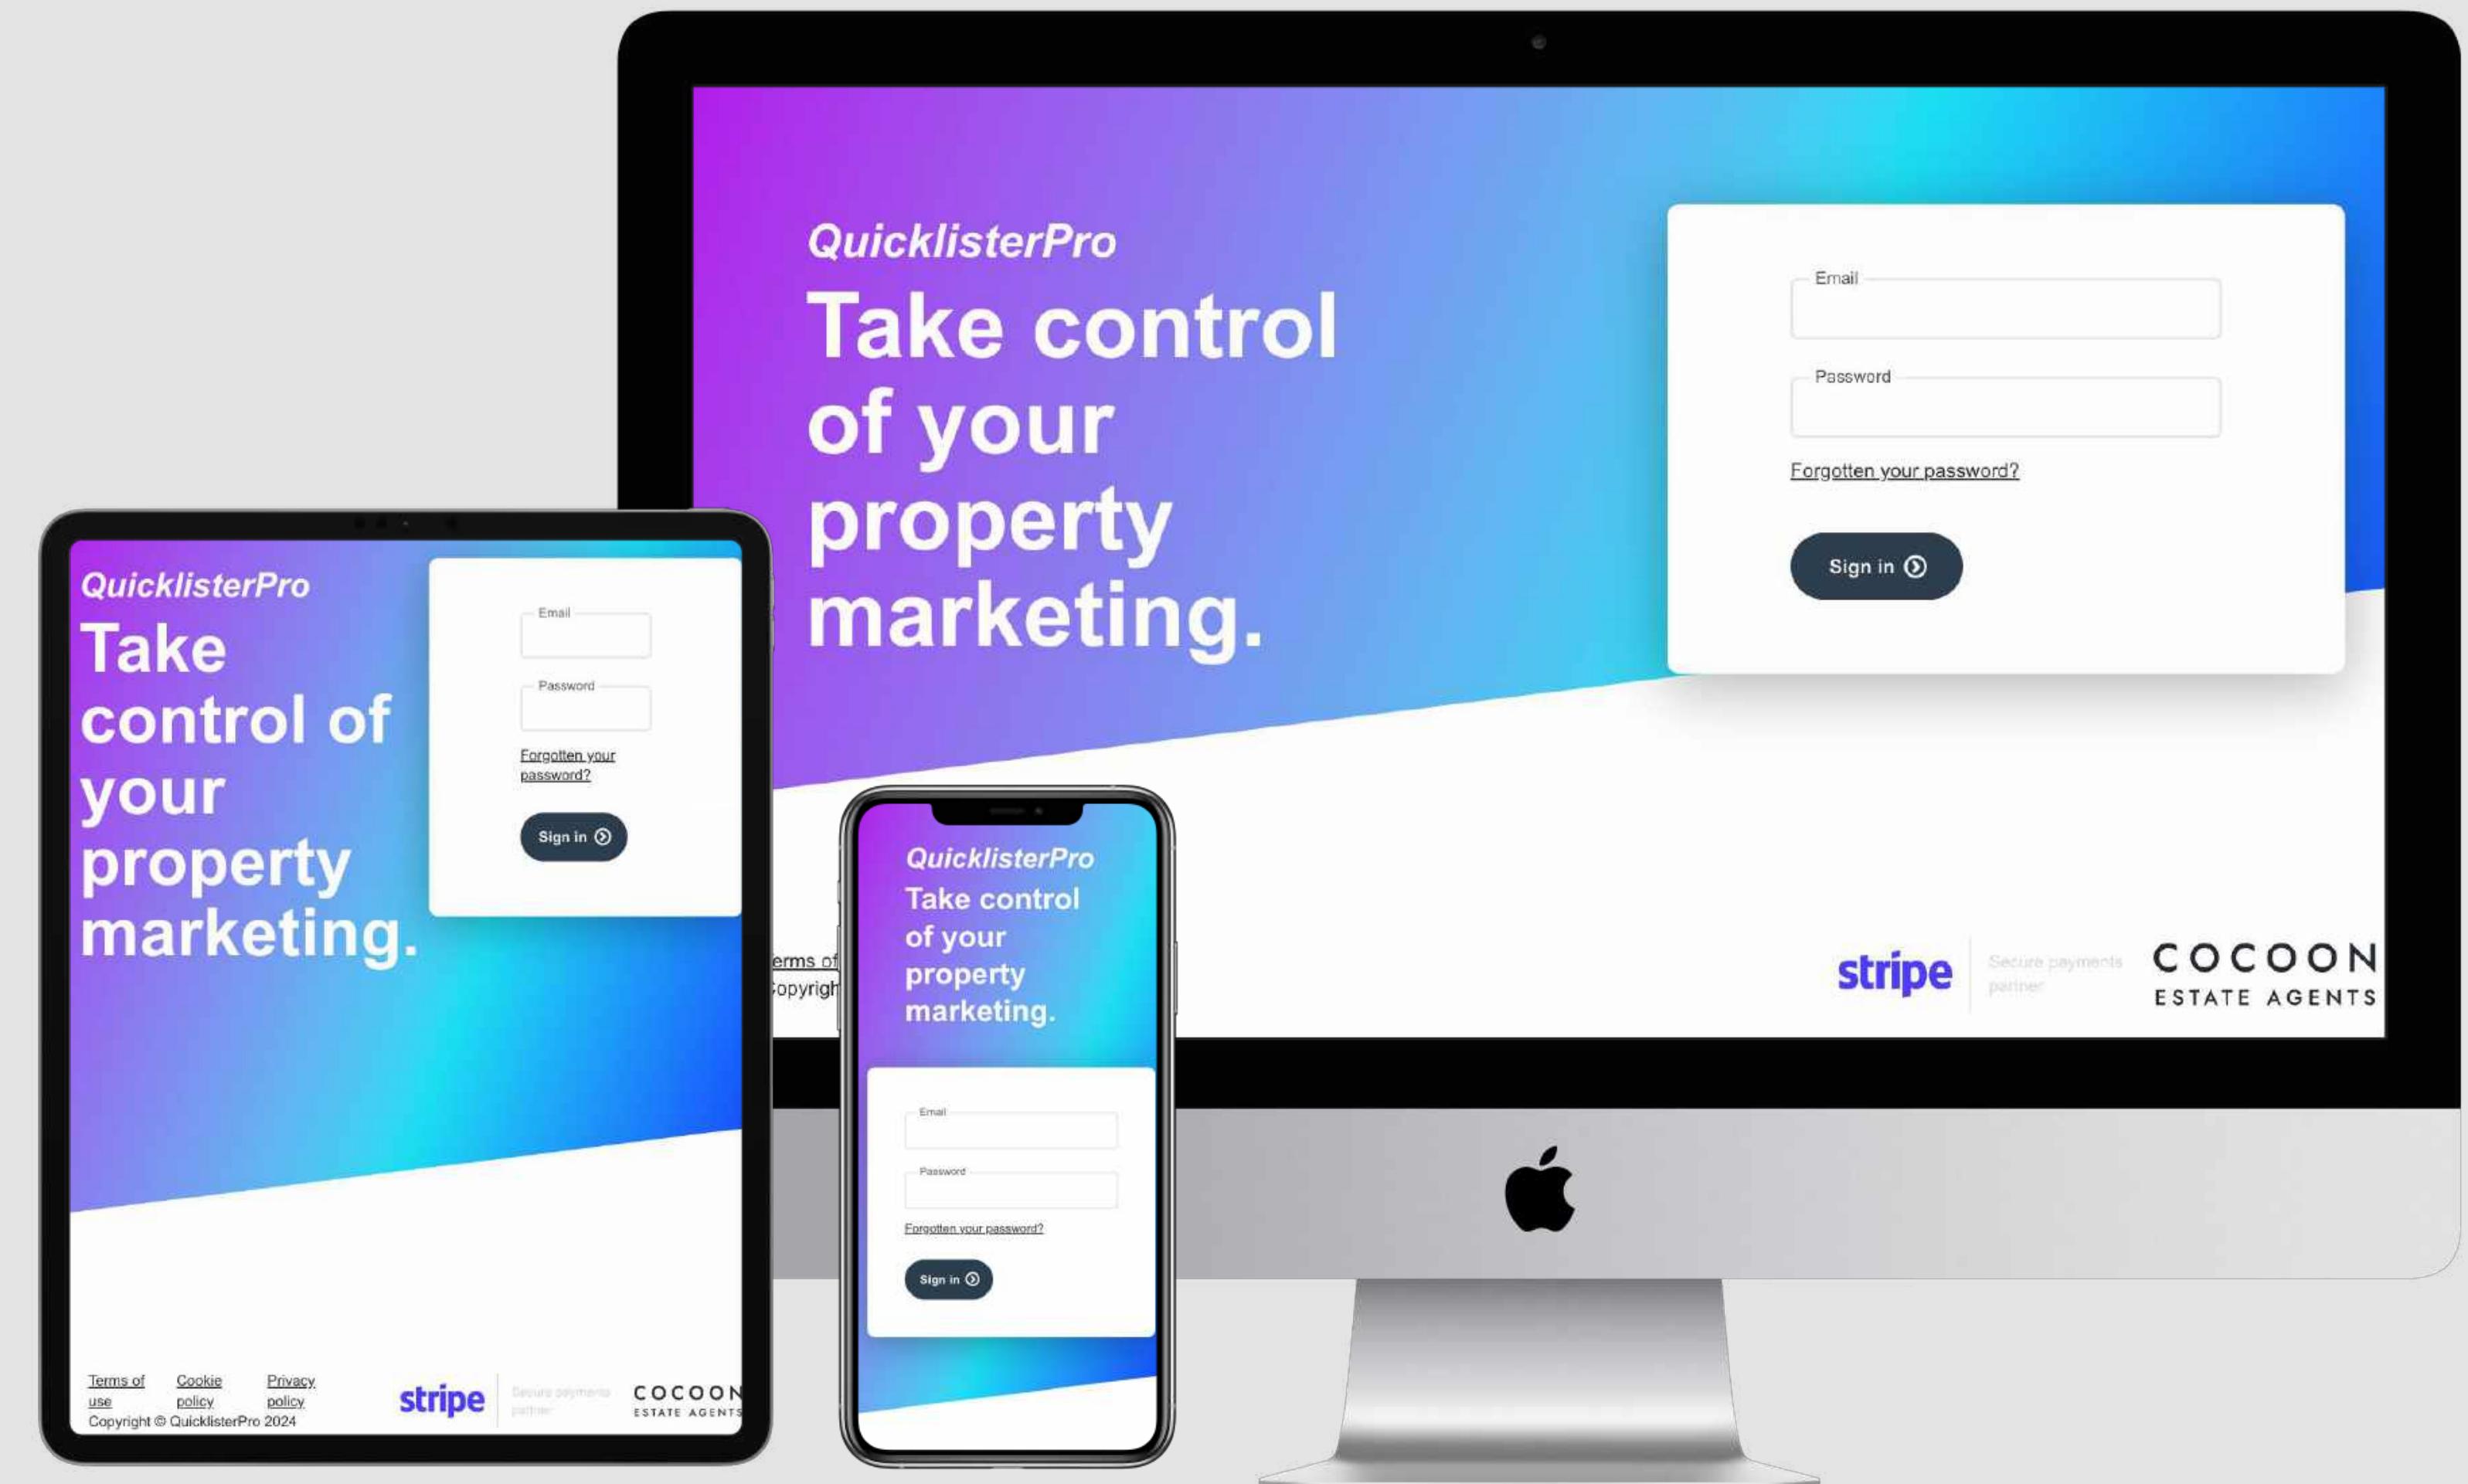

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

Stellar Soft designed and developed QuicklisterPro, a custom platform enabling property listing on major UK property sites. Users can conveniently list properties from anywhere in the UK.

- **End-to-end Property Management.** Our team developed a comprehensive real estate platform allowing users to seamlessly log in, create property listings for rent or sale, and push these listings to prominent third-party platforms like Zoopla and Rightmove.
- **Engaging User Chat Functionality.** The platform includes a custom chat feature, facilitating direct communication between potential renters/buyers and property owners. This streamlined chat functionality aims to simplify the deal-making process.
- **Streamlined Payment Process.** Our collaboration extended to integrating an advanced payment system, encompassing both internal and external payment methods. Stripe integration enables quick external payments, and users have the flexibility to use external credits for transactions.
- **Subscription Model Integration.** The Stellar Soft team integrated a subscription model, particularly beneficial for clients managing multiple properties. This feature allows clients to save costs while efficiently listing their properties on third-party platforms.
- **Memorandum of Sales Tool.** To enhance the deal-closing process, Stellar Soft implemented an easy-to-use Memorandum of Sales tool. This tool gathers crucial data about the property, seller, buyer, and their solicitors. Automated emails are triggered to all stakeholders, ensuring smooth communication throughout the sales process.

The collaborative efforts of Stellar Soft have resulted in a comprehensive real estate platform, offering not only property listing capabilities but also engaging user interactions, streamlined payments, subscription management, and efficient deal-closing tools.

BUSINESS DESCRIPTION

The company specializes in the development and sale of modules and plugins designed for E-commerce platforms. Their products enhance and extend the functionality of online stores, providing valuable solutions to optimize and customize the E-commerce experience.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

To achieve success in developing the public Shopify application, the Stellar Soft team implemented the following key strategies and actions.

- Comprehensive Integration.** The team focused on creating a robust integration between Shopify and Amazon. This involved developing features that facilitate the smooth sending of products to Amazon and the direct receipt of orders within the Shopify platform.
- Location-Agnostic Product Handling.** The application was designed to handle products irrespective of their assigned location. This flexibility is crucial for businesses dealing with diverse inventory locations.
- Real-Time Updates.** The architecture of the app was carefully crafted to provide real-time updates. This ensures that sales information is communicated promptly to both sellers and customers, contributing to a more efficient and responsive business operation.
- Seamless User Experience.** The team prioritized the development of an intuitive and user-friendly interface. This ensures that both sellers and customers can navigate the application effortlessly, fostering a positive and productive user experience.
- Efficient Order Management.** The direct receipt of orders from Amazon within the Shopify platform streamlines the order management process. Sellers can efficiently handle orders without the need for constant switching between platforms.

By combining technical expertise, a user-centric approach, and effective collaboration, the Stellar Soft team succeeded in developing a powerful public application that seamlessly connects Shopify with Amazon, offering an enhanced experience for both sellers and customers.

BUSINESS DESCRIPTION

Rebills.io is custom Laravel application for recurring payments.

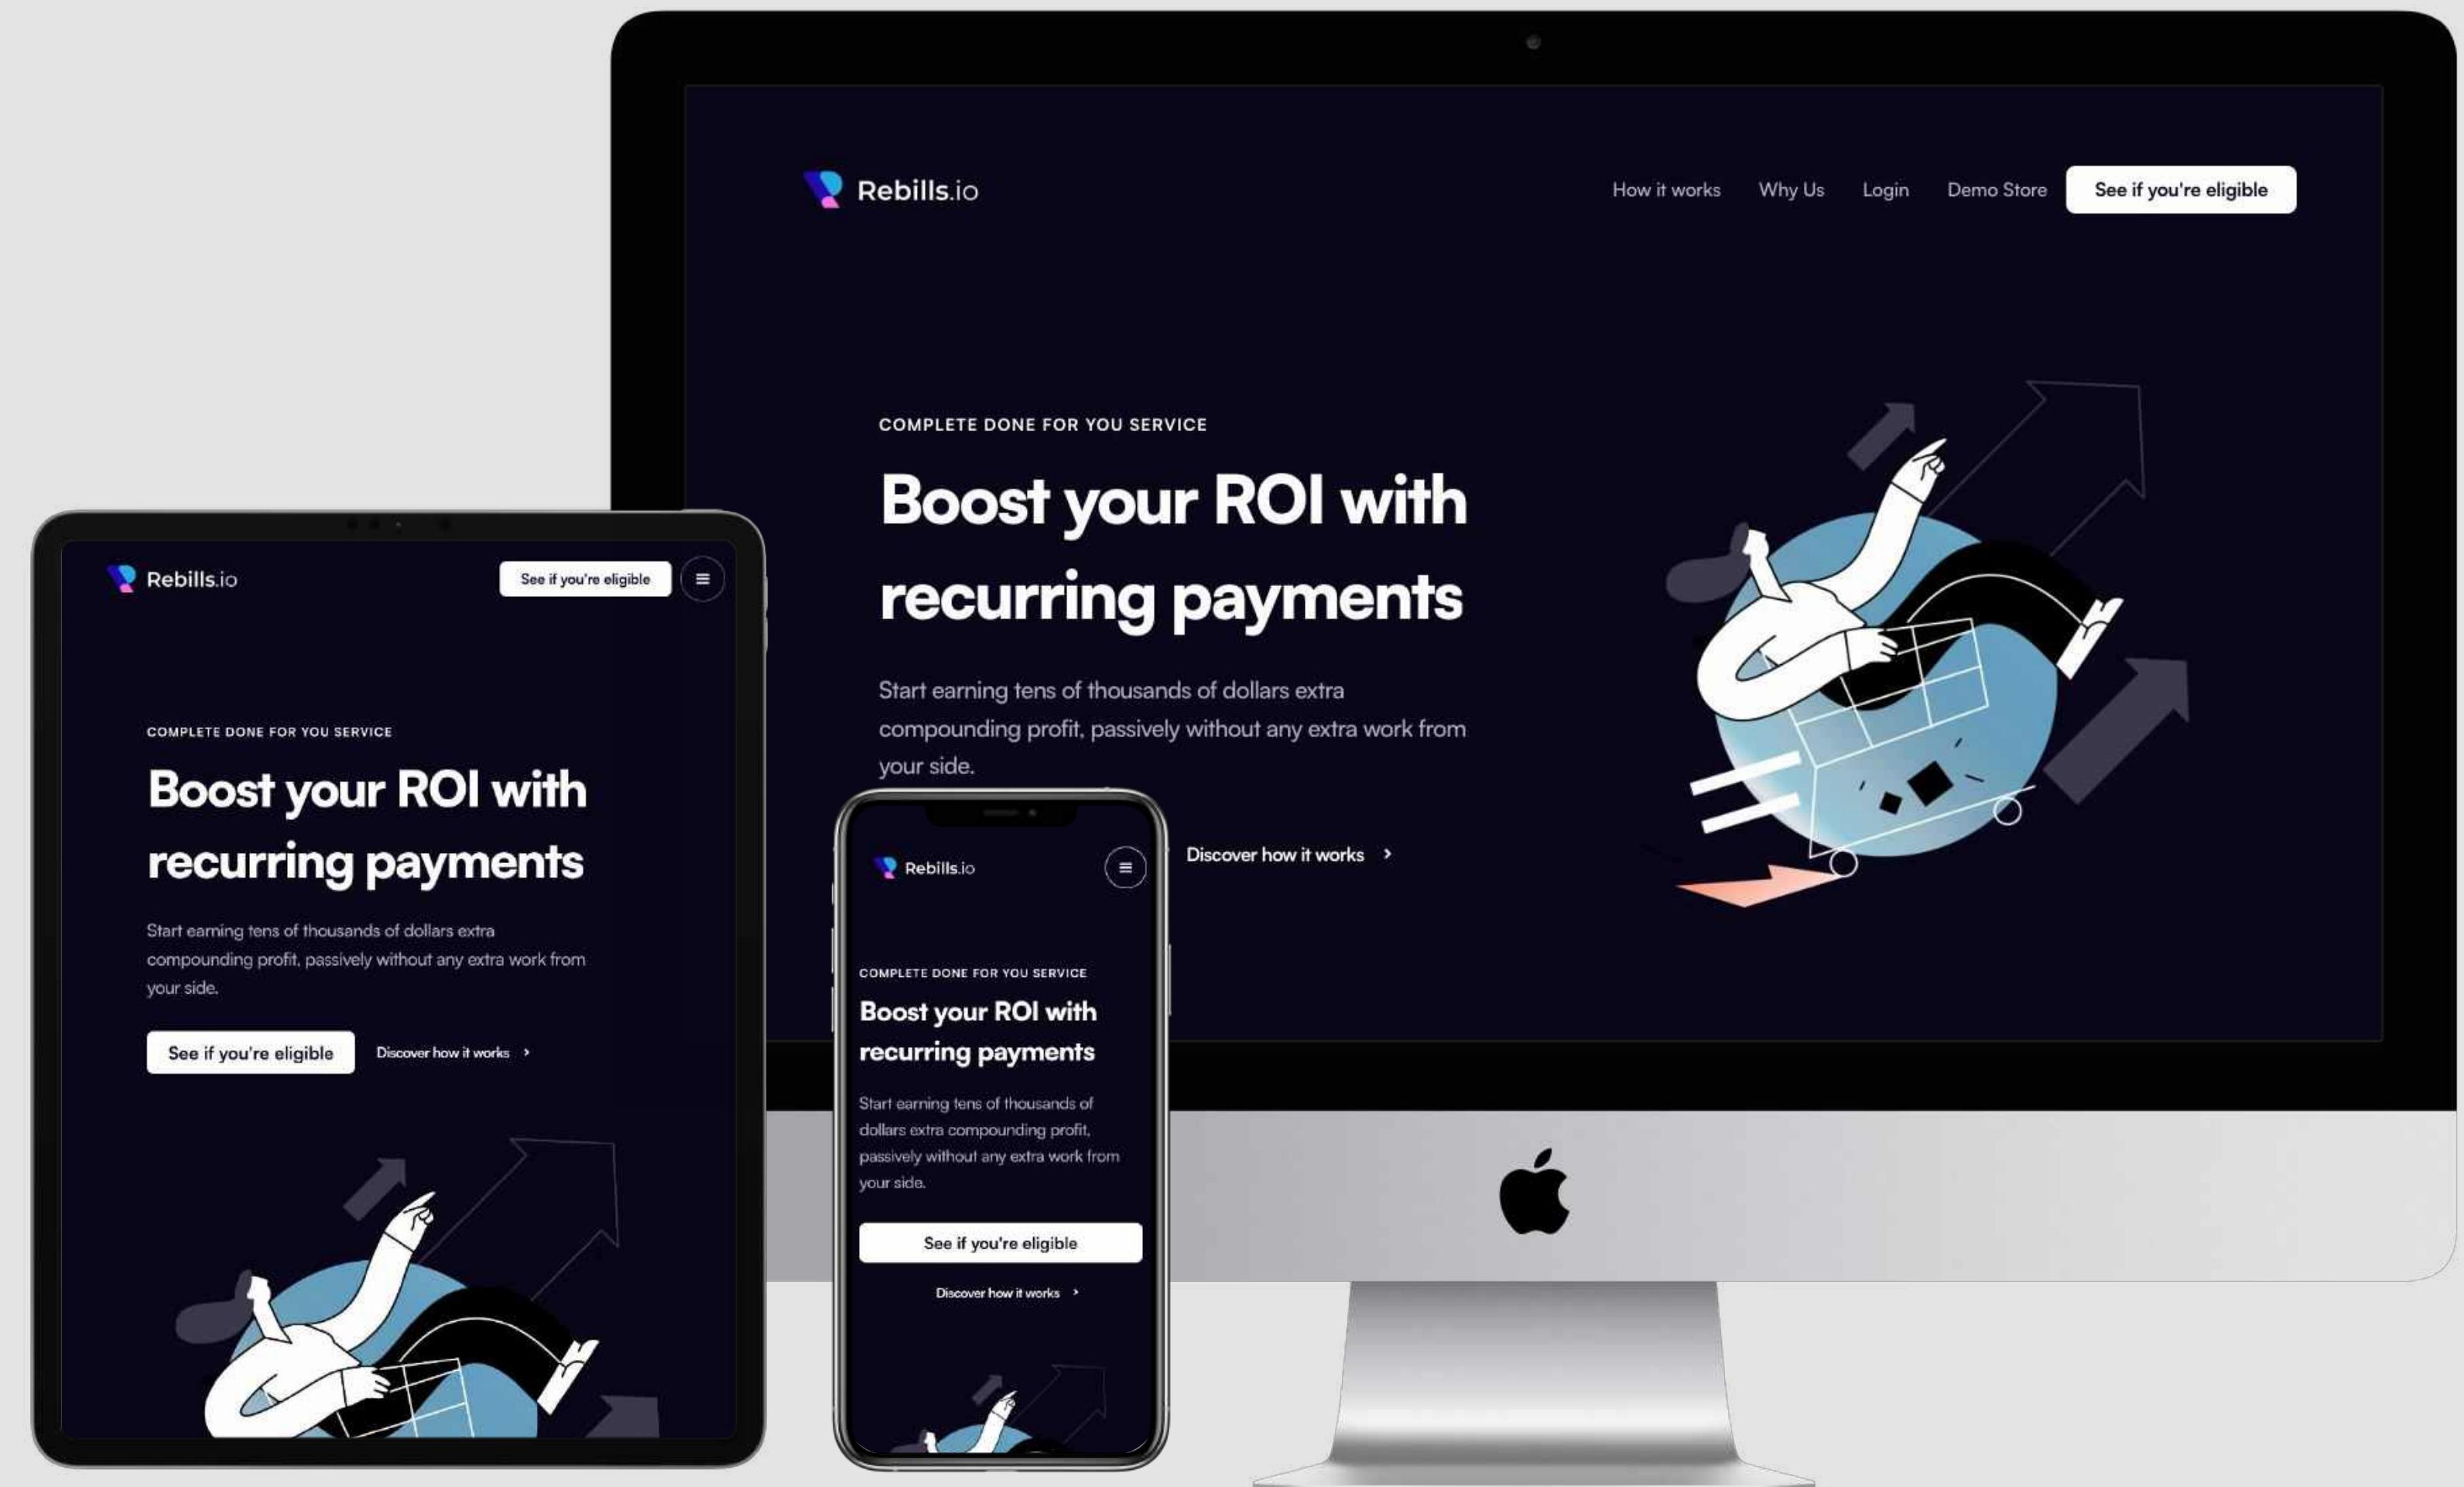

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

Stellar Soft has developed a distinctive custom application, Rebills.io, utilizing one of the most popular PHP frameworks, Laravel. This application empowers merchants with comprehensive tools for managing products, subscriptions, and accessing detailed sales statistics. A key highlight is the provision for creating a customizable checkout with an extensive range of settings.

The Rebills project is strategically integrated with the Sticky.io service, specializing in assisting brands and high-risk businesses in establishing lucrative recurring revenue programs. Key features utilized in the Rebills.io project.

- **Integration with Sticky.io Platform.** Seamless integration with the Sticky.io platform ensures a robust foundation for building profitable recurring revenue programs.
- **Integration with High-Risk Payment Gateway Systems.** The application incorporates integration with high-risk payment gateway systems, enhancing transaction security and facilitating seamless payments.
- **Page Creation Based on Adobe XD Designs.** The development process involved creating pages based on meticulously designed Adobe XD prototypes, ensuring a visually cohesive and user-friendly interface.
- **Connection with Various Data Collection Systems.** Multiple systems were connected to collect essential data for tracking conversions, providing valuable insights into the performance of the application.
- **Interaction with Shopify API.** The application interacts with the Shopify API, enabling synchronization and smooth communication with the Shopify e-commerce platform.
- **Webhook Integration (Shopify, Sticky.io).** Webhooks play a crucial role in real-time communication. Integration with Shopify and Sticky.io webhooks ensures timely updates and responsiveness to events within the integrated systems.

In summary, Stellar Soft's development of Rebills.io showcases expertise in PHP (Laravel) and integration with third-party services like Sticky.io. The application's feature set, including secure payment gateways, customizable checkouts, and seamless API interactions, positions it as a powerful tool for merchants in managing their subscription-based businesses.

The screenshot shows the Sigma CRM application's interface. On the left, there is a sidebar with navigation links: Back to Admin, Dashboard, Invoices (which is the active tab), Proposals, Contracts, Meetings, Service & Product, and Customers. The main content area has a header with tabs for 'Invoices' and 'Recurring'. Below the header, there is a message: 'Attention needed: Connect payment gateway to start receiving payments'. There are four summary boxes: 'Payment(s) in Draft' (\$0.00), 'Payment(s) in due' (\$92.14), 'Payment(s) in received' (\$0.00), and 'Unpaid/Outstanding' (\$1,720.66). Below these boxes is a table titled 'Invoices' with columns: NAME, INVOICE NUMBER, CUSTOMER, ISSUE DATE, AMOUNT, and STATUS. The table contains five rows of invoice data. At the bottom of the table, it says 'Showing 1 to 5 of 5 results'. A 'Filter' button is located at the top right of the table.

BUSINESS DESCRIPTION

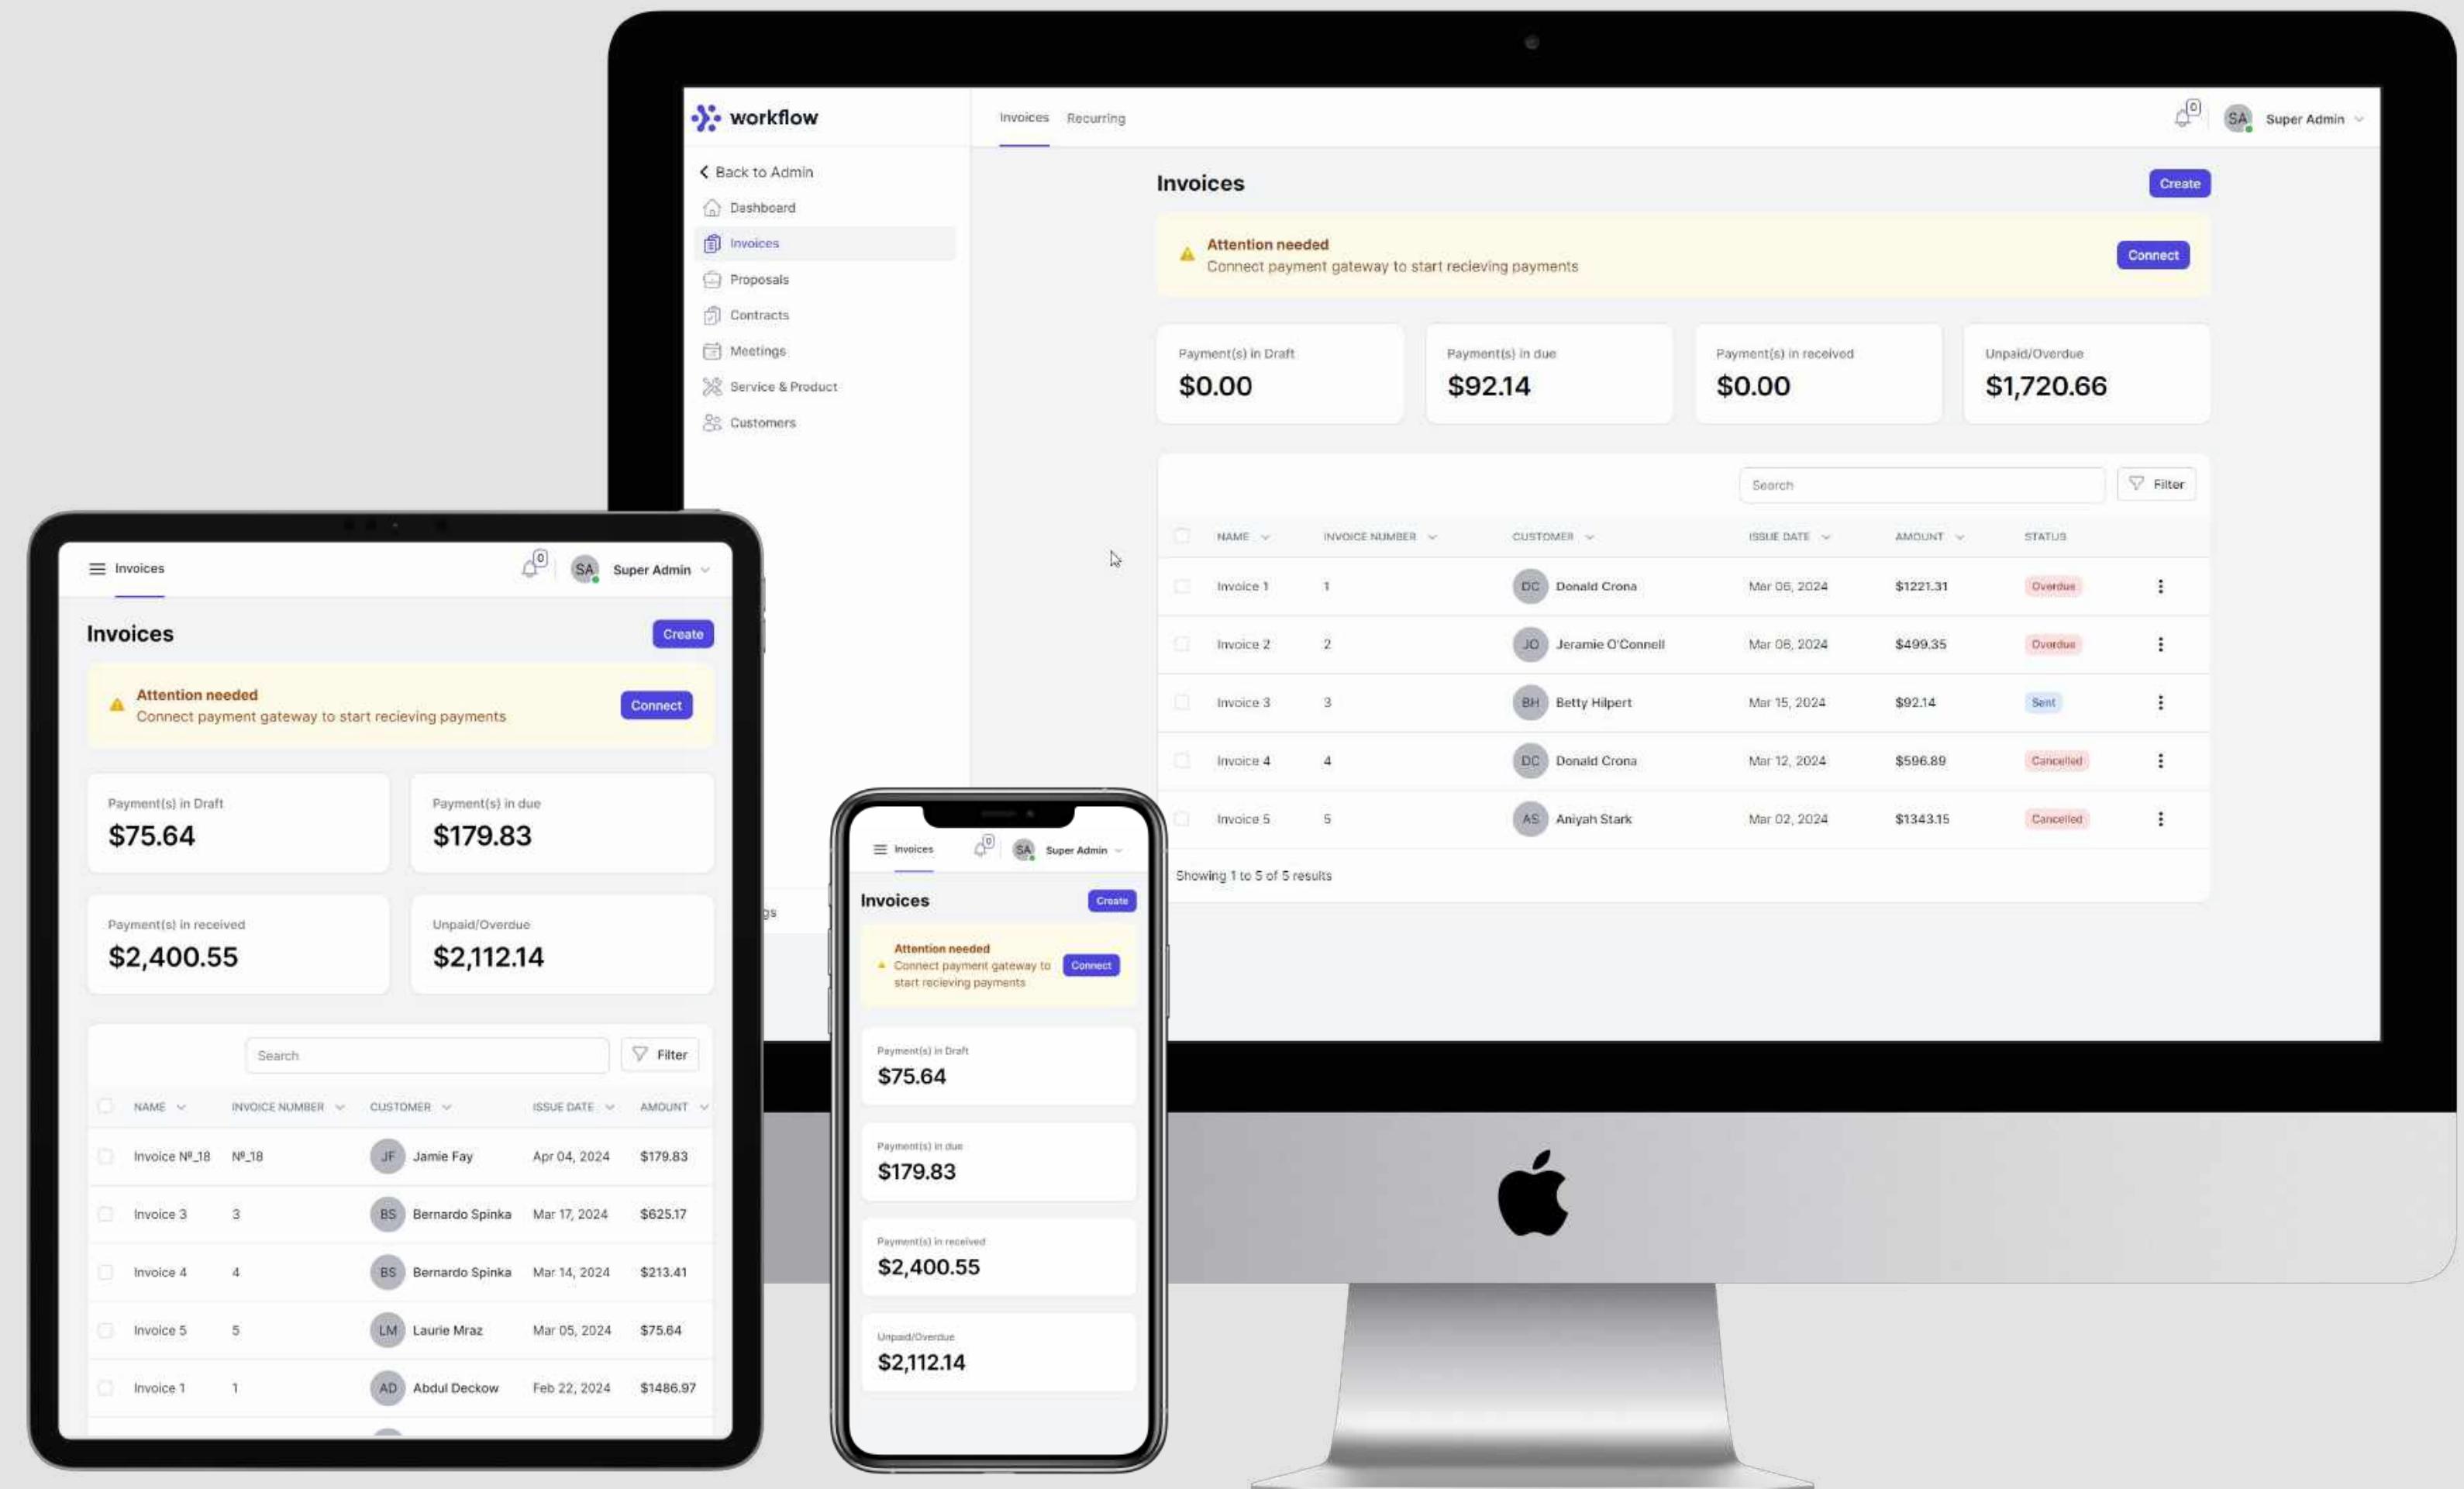

Sigma is a CRM system crafted to facilitate seamless communication between agencies and their end clients. It simplifies the process of managing accounts, sending invoices, creating proposals, and provides ample customization possibilities to cater to the specific requirements of each agency.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

In the ongoing development of the application, several key functionalities have been successfully implemented. Notably, a React.js-based constructor has been introduced as a central feature. Here are the key achievements.

- React.js-Based Constructor.** The application boasts a powerful React.js-based constructor. This innovative tool is designed to empower agency users, allowing them to seamlessly create and dispatch highly personalized contracts, proposals, and invoices.
- Effortless Crafting.** The constructor provides an intuitive and user-friendly interface, making it easy for agency users to craft documents tailored to their specific needs. The emphasis is on simplicity and efficiency in the document creation process.
- Personalization.** Users have the flexibility to position elements precisely where needed within the documents. This includes the placement of images, videos, text, and a table for detailing products and services. This level of customization ensures that documents reflect the unique branding and style of the agency.
- Incorporation of Custom Fields.** The constructor allows for the seamless incorporation of custom fields. This feature significantly enhances the adaptability of the application, enabling users to cater to a diverse range of client requirements.

The React.js-based constructor represents a cornerstone feature of the application, providing agencies with a robust tool to streamline their document creation processes. Its emphasis on flexibility, personalization, and ease of use contributes to the overall success and efficiency of the application.

BUSINESS DESCRIPTION

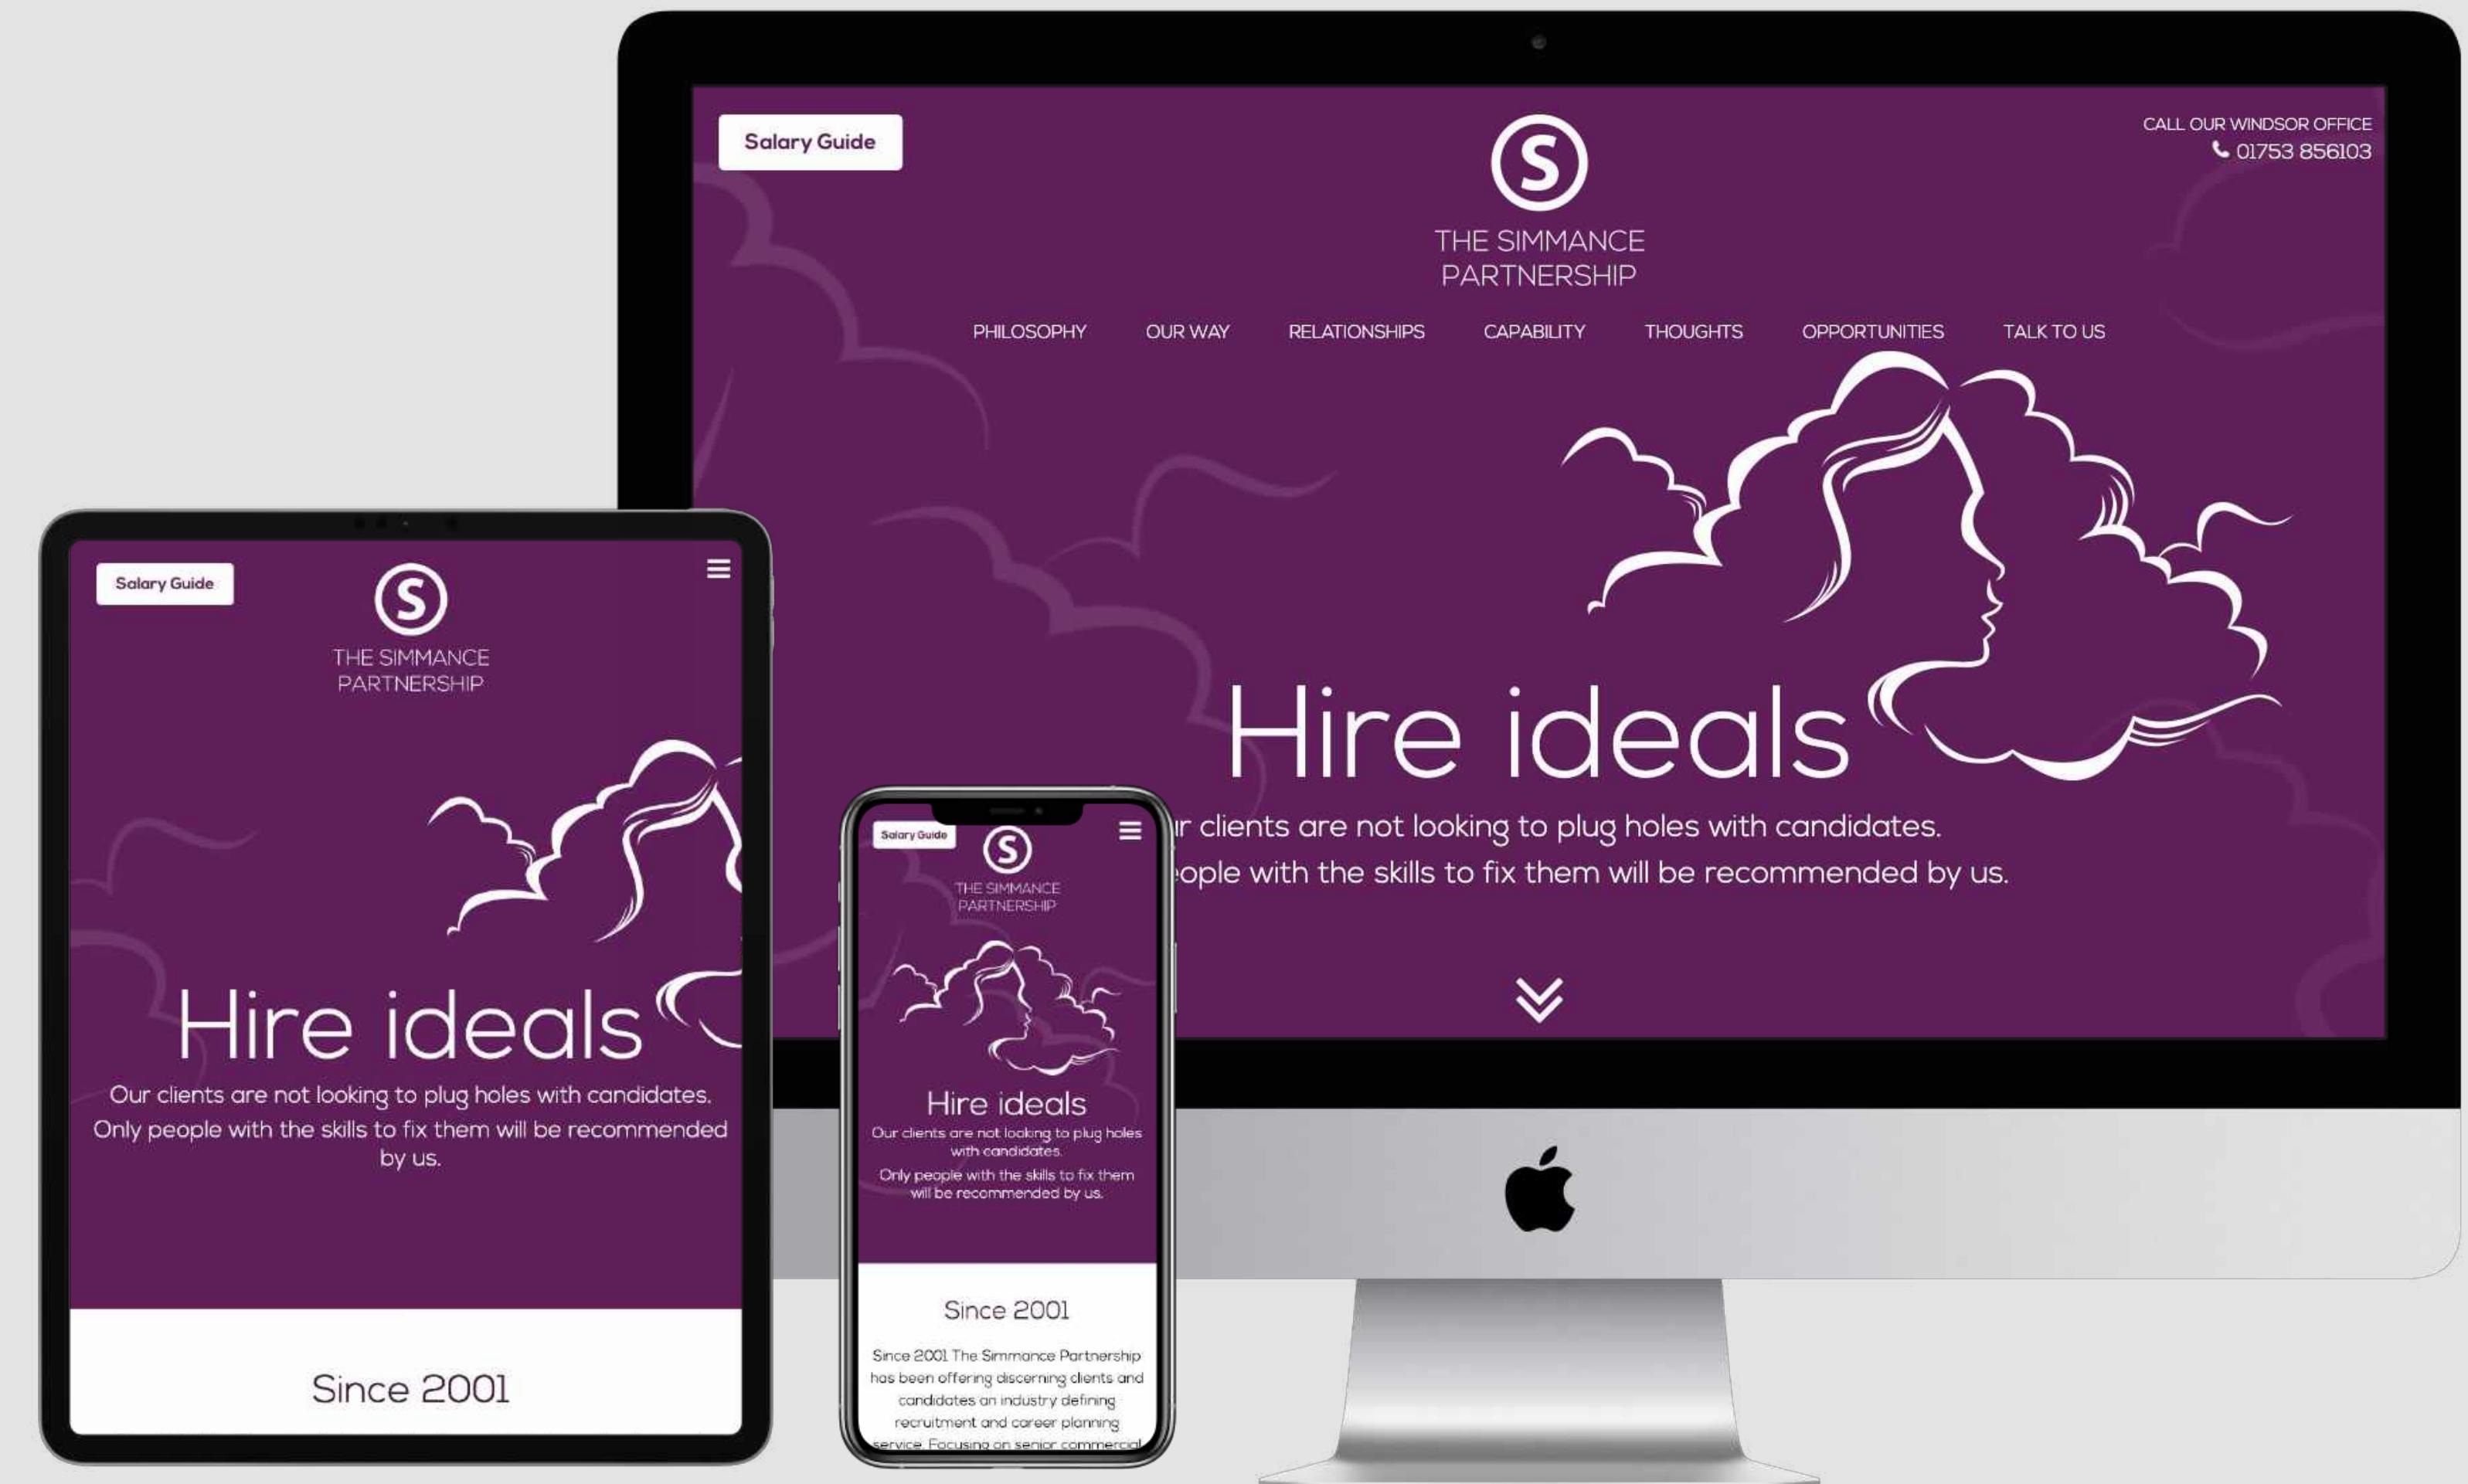

The Simmance is recognised as an industry authority on FMCG Sales and Marketing recruitment, with an approach that is as revealing as it is refreshing.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

Our team created a new, dedicated page on the website and made the changes to the existing ones. By inserting new graphics and adding new elements to the website we refresh the current site and made it more related to present time. Our team's support didn't end with the recruitment process. We maintained the future relationship with clients, providing assistance with onboarding, integration, and any additional support required to ensure a successful transition for them.

- New Page Development and Existing Page Updates.** Created a new, dedicated page on the website. Made necessary changes to existing pages by inserting new graphics and adding fresh elements. Refreshed the current site to align it with present-day aesthetics and trends.
- Ongoing Client Support.** Ensured continuous support beyond the recruitment process. Maintained a future relationship with clients by providing assistance with onboarding, integration, and additional support needs.
- Google Tag Manager.** We implemented Google Analytics (GA) and Google Tag Manager (GTM) to the website, enhancing our client's ability to track and analyze site performance and user behavior effectively.

This comprehensive approach aimed to not only enhance the website's visual appeal but also ensure a seamless transition and ongoing support for the client's needs.

BUSINESS DESCRIPTION

This business focuses on crafting EVA floor mats in Poland, with production centralized in Warsaw. The company uses their own custom built system to sell the products online.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

For a client with a Laravel custom CRM system our team developed a seamless integration solution to transfer the products from one system to another.

- **Custom CRM Integration.** Our team meticulously analyzed the architecture of the CRM system to understand its data flow and functionalities. Leveraging Docker for efficient development and deployment, we focused on integrating a Laravel package tailored to bridge the custom product database with the CRM system. We developed robust data parsing functionalities to facilitate the export of database data to a Google Spreadsheet, acting as an intermediary step before updating the product database within the CRM system. To ensure optimal performance, we implemented strategic optimizations to efficiently manage workload distribution, thereby maintaining system stability, especially during peak usage.
- **Improved Product Categorization and Pricing.** We introduced a user-friendly select option within the CRM system, empowering the client to categorize products based on various pricing tiers. This enhancement enables flexible pricing strategies and facilitates the customization of prices for products within each designated pricing category.

FFI Solutions has evolved to become a leading climate-focused research, analytics and advisory firm dedicated to delivering custom solutions that decarbonize portfolios and align with the principles that underly reaching net zero emissions by 2050.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

The Stellar Soft team provided invaluable support to the client through two key solutions:

- **Data Collection Processing System.** We developed an admin application to gather data from diverse sources, including APIs and manual table uploads. This data is organized into specific report files and shared with clients quarterly, facilitating efficient processing and analysis for climate-focused research and analytics.
- **SFTPGo Dashboard for Secure File Transfers.** Leveraging AWS services, we implemented the SFTPGo Dashboard, enabling the creation of SFTP-protected user connections for secure file transfers. This ensures data security and confidentiality during file transfers, aligning with our firm's commitment to privacy and protection.
- **Day-to-Day Support.** Our team provided ongoing assistance and troubleshooting, ensuring smooth operation and addressing any client concerns promptly. This proactive support approach ensures our solutions continue to meet the client's evolving needs while maintaining high standards of performance and security.

Closer Look is a unique social platform that's changing how creators and fans connect. It emphasizes meaningful interactions over quantity, allowing for more personalized content and engagement. This platform enables fans to get closer to their favorite creators through interactive features and discussions, fostering a community feel.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

The transition from design to implementation has been a seamless process for our team, resulting in the creation of a distinctive application. Key aspects of our achievement include.

- **Technology Stack.** Leveraging PHP, specifically Laravel 7, and React JS, our team has crafted a robust and modern application. This technology stack ensures efficiency, scalability, and maintainability.
- **Subscription Management with Stripe.** The integration of Stripe for subscription management provides users with a secure and user-friendly experience when engaging with premium features. This enhances the overall usability of the application.
- **Responsive React-Powered Front-End.** The React-powered front-end is designed to be responsive, offering a seamless user experience across various devices. Whether on mobile or desktop, users can interact with the application effortlessly.
- **Visual Appeal and Customization.** The front-end stands out for its visually appealing design. Furthermore, it provides extensive customization options, allowing users to tailor their experience according to their preferences. This emphasis on user customization enhances overall satisfaction and engagement.
- **Versatility and Adaptability.** The combination of PHP (Laravel 7) and React JS positions our platform as a versatile and adaptable solution. This versatility ensures that the application can meet the evolving needs of users in the dynamic digital landscape.

In summary, our team's use of cutting-edge technologies, emphasis on user-centric design, and integration of secure payment solutions contribute to the development of a unique and adaptable application. This application is well-positioned to cater to the diverse needs of users in the digital realm.

BUSINESS DESCRIPTION

The project is intended to promote nutrition supplements for animals created by DSM company. The users can enter their animal type and their normal feed ration to get a suggestion of the product that will bring the most advantage given the animal and feed type. Our carbohydrases increase energy utilization, animal performance and financial returns for customers. Animals need energy to live, grow and reproduce just as much as we do. Successful livestock production therefore relies on maximizing the energy present in the diet of animals. Of course, energy used more efficiently also increases financial returns for producers. Our carbohydrases help do all of these things.

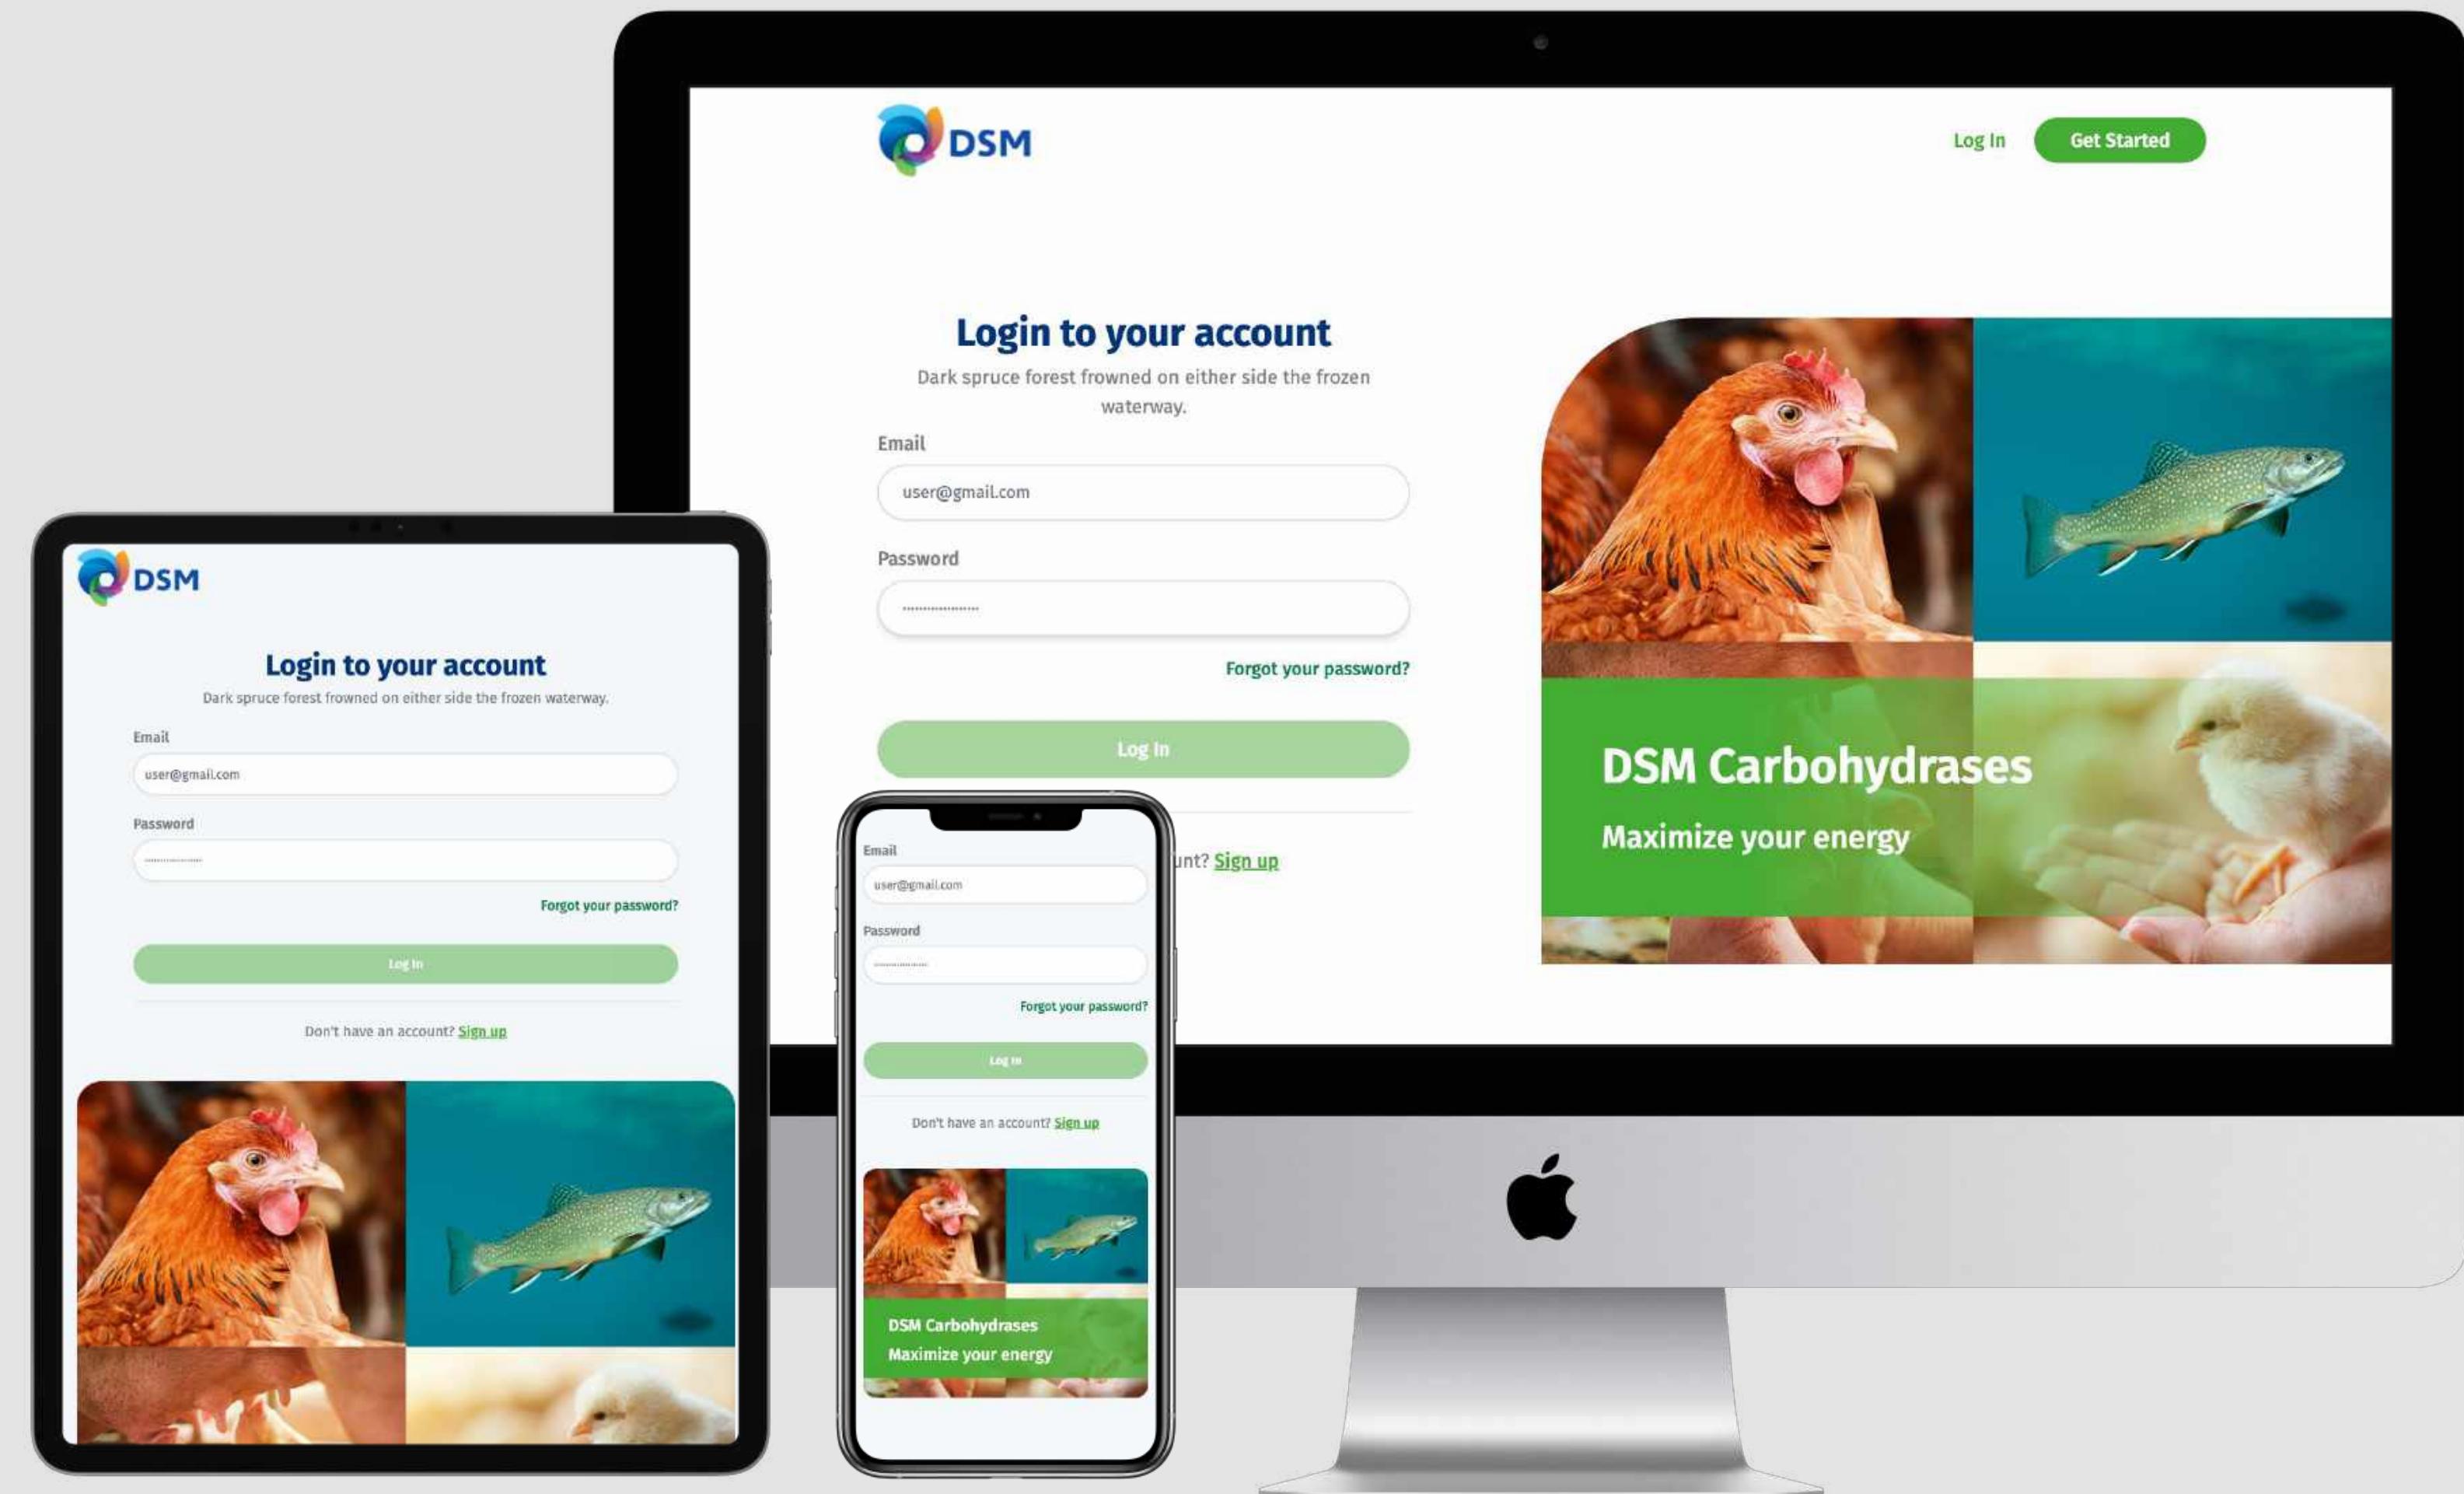

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

Through the implementation of a robust backend API and database system, coupled with a user-friendly frontend SPA interface, we ensure efficient data management and seamless user interaction. Technical Implementation Details.

- **Backend (API and Database).** Developed API endpoints to retrieve data from the database and serve it to the frontend. Implemented database management systems to efficiently store and manage data related to carbohydrase products and their effects on animal nutrition.
- **Frontend (Single Page Application - SPA).** Created a responsive and intuitive frontend interface using Single Page Application (SPA) technology. Designed user-friendly interfaces for easy navigation and interaction with carbohydrase-related data and information.
- **Monolithic Architecture.** Followed a monolithic architecture approach, where all functional parts of the code are not separated into services.

Utilized Laravel framework structure for backend development, ensuring consistency and scalability in code organization and maintenance.

BUSINESS DESCRIPTION

Shopify App to help merchants who are using Shopify and Amazon for selling goods to make available BOPIS (Buy online, pick up in store) feature in Shopify.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

We have successfully developed Shopify public app that enhances the pick up in store option, extending it seamlessly from Shopify to Amazon. Here are the key aspects of their accomplishment.

- **Cross-Platform Integration.** The module allows the activation and expansion of the pick up in store option, connecting seamlessly from Shopify to Amazon. This integration enables sellers to send an unlimited number of products for sale on Amazon and manage Amazon orders directly through the Shopify platform.
- **Efficient Order Management.** Sellers can efficiently update inventory, fulfill orders, and process refunds directly within the app. This centralized approach simplifies the Click&Collect process, enabling users to manage it effortlessly in one place without additional efforts.
- **Real-Time Content Loading.** The team implemented an easy-to-use app architecture that enables the real-time loading of all content. This means that users can see new orders without the need for page reloads, contributing to a smoother and more responsive user experience.
- **Code Efficiency.** The code efficiency implemented in the module ensures that all orders come through quickly, and inventory is updated immediately. This efficiency is crucial to avoid overselling and to keep accurate track of product stock.
- **Avoiding Overhead.** By managing the Click&Collect process in one place, the module minimizes the overhead associated with order processing and inventory management. This streamlining is beneficial for sellers dealing with a high volume of orders.

Overall, the module developed by Stellar Soft provides a comprehensive solution for sellers looking to integrate and manage the pick up in store option seamlessly across Shopify and Amazon. The emphasis on real-time updates, code efficiency, and centralized management contributes to the success of this solution.

**BUSINESS DESCRIPTION**

This application is designed as supporting material for the Fibre book that will be published by DSM. This dashboard aims to enhance data-driven decision-making processes, improve efficiency, and reduce errors in selecting the right raw materials and nutrients for animal feed formulation. The dashboard will allow users to access, filter, and compare data in various visual formats. It will also provide a secure and user-friendly interface for both regular and admin users, ensuring that only authorized book buyers can access the dashboard.

HOW OUR TEAM HELPED THE CLIENT TO SUCCEED

The proposed solution is to build an interactive dashboard web application with custom mobile-friendly design made from the ground up to include the company's theme which is designed with usability in mind. The solution simplifies the visualization and management of raw material and nutrient databases in the animal feed production industry derived from years of research and lab tests.

- **Enhanced Data Access and Analysis.** Enables users to access, filter, and compare data in various visual formats. Facilitates better decision-making through comprehensive data analysis.
- **Secure and User-Friendly Interface.** Provides a secure and user-friendly interface for both regular and admin users. Ensures that only authorized book buyers can access the dashboard.
- **Backend Development.** Implementation of backend functionalities such as API (returns data from DB to frontend) and database management.
- **Frontend Development.** Creation of a Single Page Application (SPA) for the frontend to deliver a seamless user experience.
- **Monolithic Architecture.** All functional parts of the code are not separated into services, following the basic Laravel framework structure.
- **Mandatory QR Code Scanning for Signup.** Implementation of mandatory QR code scanning for signup to ensure secure access to the dashboard.
